FEU INSTITUTE OF TECHNOLOGY

Where to go during a volcanic event?

- Stay indoors as volcanic ash is a health hazard, especially if you have respiratory difficulties such as asthma or bronchitis.
- If outside at the time of the eruption, seek shelter in a building.
- If caught in volcanic ashfalls, wear a dust mask or use a handkerchief or cloth over your nose and mouth.

- When indoors, close all windows and doors to limit the entry of volcanic ash. Place damp towels at thresholds.
- Move away from hazard zones to improve your chances for safety.
- Stay out of valleys and low lying areas that lead from the mountain.
- If officials detect a lahar seek high ground off the valley floor as quickly as possible, such as moving up a hillside. Then, shelter in a good place.
